Project 1: Domain Setup

CS 212 • 20 Points Total
Due Monday, September 12, 2016

Objectives

- Gain access to your web hosting location.
- Create a web page.
- Upload your page and display it in a browser.

Assignment

We want to get some practice using the basic tools for publishing a web page and, at the same time, test that our website works properly and is visible to the world. To accomplish that, use the following steps:

- Use an editor to create an HTML file.
    - Include some basic content. At a **minimum**, I expect to see you use a header section with a title tag, heading text with the appropriate tag, and a body section containing more than one paragraph.
    - Use a simple text editor; you can switch to dedicated web page editors later in the semester
- Use a secure FTP tool to upload your file to your site.
    - The instructions for accessing your site are at http://www.cefns.nau.edu/~pek7/CS212/CEFNS%20Web%20Hosting.pdf
    - Even if you already have a non-CEFNS site, please use your CEFNS space for this class.
    - For Windows, I like using WinSCP, but you may use any client software you prefer.
- Display your site in a web browser.
    - The URL should be *http://www.cefns.nau.edu/~yourusername/*, for example, http://www.cefns.nau.edu/~pek7/.
    - The tilde ('~') may not be necessary for new accounts.
    - Take a screen shot of the page to include in your report.

Project Report

The final step of this assignment is to create a report consisting of a cover page, an overview of the project, sample output, and the source code. See Assignment Policies on either the class website or Bb Learn. Just as a reminder, the **cover page** should contain the following information. Correct the date to be the day you actually turn in the project.
